

Dear FCC:

In the matter of petition RM-10740, I encourage you to reject the petition as presented. It's clear to me that the petitioner's primary concern is that they believe that some amateur radio operators are purposely misusing the bands by creating interference, and there are already rules that cover intentional interference. By restricting SSB emissions to 2.8KHz we also restrict the ability for amateurs to experiment, which goes against the very nature of the service.

Thank you for your consideration in this matter.
